1. Introduction

CRI R405LQ LR EVA KIT is major packed with a R405LQ LR module, Antenna Kit (frame with 4 pcs Dipole Antenna) and accessories (cables and adaptor), through USB or UART connection to work similar as external WiFi network module. The R405LQ can support RNDIS (Remote Network Driver Interface Specification) standard as module interface control. The R405LQ LR is leverage WiFi technology, and capable for long distances connection and data communication.

R405LQ LR Module

Antenna Kit

When using R405LQ LR to build up connection network, please need to set up one of R405LQ LR as AP mode (default), and others R405LQ LR are set as STA (Client) mode. They are communicate working in closed network areas.

1.1 Features and Specification

The following table shows the detailed features and Spec. of R405LQ LR module and Antenna.

Key features of R405LQ LR module

Item	Description
Platform	Qualcomm QCS405 + QCN9074
Technology	Leverage Wi-Fi 6 (802.11ax)
MIMO	4T4R
Frequency	<ul style="list-style-type: none"> ● 2412MHz~2462MHz ● 5180MHz~5240MHz / 5745MHz~5825MHz
RF signal B.W	5MHz / 10MHz / 20MHz
Throughput	240 Mbps (TBC)
Radio Tx Power	<ul style="list-style-type: none"> ● $\leq 24\text{dBm}$ @ 2.4GHz ● $\leq 24\text{dBm}$ @ 5GHz
Distance	> 10KM (Open space without distractions)
Connection Interfaces	<ol style="list-style-type: none"> 1. USB 3.0 (Type C) 2. USB 2.0 (Micro USB, for FW UD) 3. UART x2 (1.8V)

Item	Description
	4. UART x1 (3.3V, for Debug only) 5. Buttons x6
Power Supply	DC 6.6V~17V via Power Jack
Power Consumption	<ul style="list-style-type: none"> ● 2.4GHz 4T4R Tx < 9.8W ● 2.4GHz 4T4R Rx < 4.0W ● 5GHz 4T4R Tx < 13.8W ● 5GHz 4T4R Rx < 4.5W
Dimension	60 x 72 x 9.9 mm
Weight	Around 21 g
Operation Temp.	-20 ~ 70 °C
Storage Temp.	-20 ~ 70 °C
Device Driver	RNDIS (Remote Network Driver Interface Specification)

Notice : When using, be sure to connect the antenna as a load at the antenna terminal to prevent no-load reflection from damaging the PA.

Major Spec. of Dipole Antenna

Item	Description
Frequency	2400 ~ 2500 MHz 5150 ~ 5850 MHz
S.W.R	≤ 2.0
Antenna Gain	5 dBi ± 0.5 dBi @ 2400 ~ 2500 MHz 5 dBi ± 0.5 dBi @ 5150 ~ 5850 MHz
Efficiency	>81% @ 2400 ~ 2500 MHz >73% @ 5150 ~ 5850 MHz
Polarization	Linear
Impedance	50 ohm
Connector	RP-SMA male
Operation Temp.	-40 ~ 65 °C
Storage Temp.	-40 ~ 80 °C

Notice : Antenna Kit is placed 4 pcs Dipole Antenna at 4 corners of base frame.

1.2 Product Diagram

R405LQ LR EVA KIT contains the items listed in the table below, and typical evaluation case is configured setup like below picture.

No.	Box contents	Q'ty
1	R405LQ LR EVA KIT (LR Module + Heat sink + Antenna Kit)	1
2	USB Type A to C Cable	1
3	AC110/220V to DC 12V 36W Adaptor	1
4	USB Type A to Micro Cable (option for FW UD)	1
5	USB Type A to UART Cable (option for Debug)	1
6	XT60 Cable (option for DC Power)	1
7	Quick User Guide	1

1.3 Major interface components location

Below picture identify the major interface components and connectors found on the R405LQ LR module

No.	Function Description	No.	Function Description
1	DC Power Jack	10	Key SW, Pair
2	USB 3.0 Type C	11	Key SW, Volume -
3	USB 2.0 Micro (for FW UD)	12	RESET (QCS_RESIN_N)
4	RF Conn, Chain 1	13	USB BOOT
5	RF Conn, Chain 2	14	JTAG (for Debug only)
6	RF Conn, Chain 3	15	UART (1.8V)
7	RF Conn, Chain 4	16	UART (1.8V)
8	Key SW, Power	17	UART (3.3V, for Debug only)
9	Key SW, Volume +	18	USB 2.0 (ALT with #3 for FW UD)

2. Device Tools Operation

This chapter introduces the detail setup and testing steps of R405LQ LR EVA KIT build in configuration tools, and via PC's connection and operation. Please install the ADB (Android Debug Bridge) environment in your PC at first, then refer [section 1.2](#) to setup R405LQ LR EVA KIT and connected with PC via USB cable.

Please use the "adb devices" command to check whether the R405LQ LR module is successfully connected to the PC ? Then use the "crifcg" command to enter the device tool's control menu of R405LQ LR EVA KIT.

```
jeffrey@TP620:~$ adb devices
List of devices attached
e057c36 device

jeffrey@TP620:~$ adb shell
sh-5.0#
sh-5.0# crifcg _
```

2.1 AP mode Menu operation

R405LQ LR EVA KIT can be configured as AP (Access Point) mode or STA (Station, Cline) mode through System Menu setup. This section introduces when R405LQ LR is configured as AP mode then re-power on. After connected with ADB PC, and enter "crifcg" command. The items select Menu will be shown on ADB PC as below.

```
1.0110.1
loadConfig: channel: 36, freq: 5180
loadConfig: bandwidth: 20MHz
loadConfig: mode: 11AHE20

***** CRI Wi-Fi Config Tool - Menu *****
  SAP Menu
  1: SAP - Settings
  2: SAP - Service Switch (on/off)
  3: SAP - Switch Channel / Bandwidth
  4: SAP - Advance setting (CBS/SBS/Long Range)
  5: SAP - Get Current Channel and Bandwidth
  6: SAP - Get RSSI
  7: SAP - Throughput test

  System Menu
  91: System - Enable device as SAP mode.
  92: System - Enable device as STA mode.
  93: System - Enable iperf service.
  95: Device Info
  99: Factory Reset.

  0. Exit.

Please enter the operation number to be performed: _
```

```

2.2 STA (Cline) mode Menu operation

This section introduces when R405LQ LR is configured as STA (Cline) mode then re-power on. After connected with ADB PC, and enter “cricfg” command. The below items select Menu will shows on ADB PC.

```
1.0129.1
***** CRI Wi-Fi Config Tool - Menu *****
  STA Menu
1: STA - Scan the Available Hotspots
2: STA - Settings
3: STA - Service Switch (on/off)
4: STA - Connection status
5: STA - Throughput test

  System Menu
91: System - Enable device as SAP mode.
92: System - Enable device as STA mode.
93: System - Enable iperf service.
95: Device Info
99: Factory Reset.

0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: _
```

2.2.1 STA (Cline) Setting

When enter “1” at top menu, then into “STA - Settings” menu.

```
  STA Settings
1: STA Mode: Show WPA supplicant network Info.
2: STA Mode: Get Connected SSID And PSK.
3: STA Mode: Add new SSID And PSK.
4: STA Mode: Remove Saved SSID.
5: STA Mode: List the Actived WPA supplicant.

0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: _
```

You can enter “2” to get current connected SSID of AP

```
Current current connection, ssid: CRIssidJeff

  STA Settings
1: STA Mode: Show WPA supplicant network Info.
2: STA Mode: Get Connected SSID And PSK.
3: STA Mode: Add new SSID And PSK.
4: STA Mode: Remove Saved SSID.
5: STA Mode: List the Actived WPA supplicant.

0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: 2_
```

Or, enter “5” to get the list of active WPA supplicant which shows as below picture as reference.

```

network id / ssid / bssid / flags
0      CRIssidJeff   any      [CURRENT]

STA Settings
1: STA Mode: Show WPA supplicant network Info.
2: STA Mode: Get Connected SSID And PSK.
3: STA Mode: Add new SSID And PSK.
4: STA Mode: Remove Saved SSID.
5: STA Mode: List the Actived WPA supplicant.

0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: 5_
    
```

2.2.2 STA Connection status

When enter “4” at top menu, then get current W405LQ LR Cline connection information.

```

***** CRI Wi-Fi Config Tool - Menu *****
STA Menu
1: STA - Scan the Available Hotspots
2: STA - Settings
3: STA - Service Switch (on/off)
4: STA - Connection status
5: STA - Throughput test

System Menu
91: System - Enable device as SAP mode.
92: System - Enable device as STA mode.
93: System - Enable iperf service.
95: Device Info
99: Factory Reset.

0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: 4_
    
```

```

Connected to 46:a8:42:ff:46:a8 (on ath1)
SSID: CRIssidJeff

iperf Done.
```

2.3 System Menu operation

The “System Menu” are common supported by both AP mode and STA (Cline) mode of R405LQ LR.

```
System Menu
91: System - Enable device as SAP mode.
92: System - Enable device as STA mode.
93: System - Enable iperf service.
95: Device Info
99: Factory Reset.

0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: _
```

2.3.1 System – Enable device as SAP mode

When enter “91” at top menu, then R405LQ LR module will be configured as AP mode, and disable STA (Cline) mode.

Note : The system only changes the configuration file. To complete the change mode, you need to restart the device.

2.3.2 System – Enable device as STA mode

When enter “92” at top menu, then R405LQ LR module will be configured as STA (Cline) mode, and disable AP mode

Note : The system only changes the configuration file. To complete the change mode, you need to restart the device.

2.3.3 System – Enable iperf service

When enter “93” at top menu, then R405LQ LR module will enable iperf service.

After enable iperf service, the R405LQ LR can perform to response specified iperf test package on network.

2.3.4 Device Info

2.3.5 Factory Reset

3. Evaluation Case Operation

3.1 WiFi AP access

Since R405LQ is default set as AP mode, you can check whether the default SSID “CRIssid” is on the connection menu through the WiFi function of your computer or mobile phone after power on the device. And, the R405LQ does not provide the DHCP function by default, please need to manually specify the IP address of cline device.

3.1.1 WiFi Connecting

Please refer [chapter 1.2](#) to setup R405LQ LR EVA Kit then power On. And, please use a mobile phone as cline device, then choose SSID by “CRIssid” from WiFi connection menu. Then, enter password (default by “12345678”) to connect with R405LQ (AP mode).

3.1.2 Cline device IP address setting

After cline device has connected with R405LQ, please refer below picture to setting IP address related fields at cline device side, then save the setting.

- IP setting : static (disable DHCP)
- IP address : 192.168.1.x
(set each device to have a different x number)
- Gateway : 192.168.1.1
- DNS : 8.8.8.8

3.1.3 WiFi Connection verify

After completing the above settings, the cline device (mobile phone) can connect to the R405LQ EVA Kit (AP mode). Then, you can use some 3rd party's Application Program which like "Wifi Analyser" to check the connection status and information.

3.2 Throughput test by paired 2 sets EVA Kit

This chapter will introduce how to use 2 sets EVA Kit, one is setup as AP mode, and another one is setup as STA mode, then through R405LQ module build in tools to perform “iperf” throughput test as evaluation case.

3.2.1 Setup at AP side

- A. Please refer [chapter 2.3.1](#) System Menu 91 operation to setup 1st EVA Kit as AP mode. Please re-power off/on once mode has been changed.
- B. Please refer [chapter 2.3.3](#) System Menu 93 operation to Enable iperf service.

3.2.2 Setup at STA (Cline) side

- A. Please refer [chapter 2.3.2](#) System Menu 92 operation to setup 2nd EVA Kit as STA (Cline) mode. Please re-power off/on once mode has been changed.
- B. Please refer [chapter 2.3.3](#) System Menu 93 operation to Enable iperf service
- C. Please refer [chapter 2.2.2](#) STA Menu 4, to check WiFi connection status, and confirmed WiFi has been connected.

3.2.3 Perform iperf test

- A. Please refer [chapter 2.2.3](#) STA Menu 5, to enter STA Throughput Test Menu. Then, choose the test item which you would like to do ?
- B. For example, after enter 4, then the test result of “UDP : iperf 10 second“ will be shown like below picture.

```
run: iperf3 10 seconds in UDP.

4. Mechanical Specification

4.1 R405LQ LR module Mechanical dimensions

4.2 Antenna Kit outline

4.3 Weight

Around 335 ± 10 g (included R405LQ LR module + Antenna Kit + Heat sink, excluded AC/DC Adaptor and external cable)

5. Product Marking, Ordering and Shipping Info.

5.1 Product Marking (Label)
