COREXOM R405LQ LR MODULE

DATASHEET

Rev. V0.5 (Preliminary)
2025/01/10

P/N : SP.F1J01G003

Revision History

Rev.	Date	Description
0.0	2024/03/27	Draft
0.1	2024/04/01	Model name updated
0.2	2024/06/25	P2. Updated Key SW function name (valid start from FW versions 0.0.70 and 2.0.6)
0.3	2024/07/03	P2. Add new item #19 to explain the function of PJ1 Conn
0.41	2024/11/01	Change P/N group number from 80. to SP. Add new section 1.3 MIMO RF Channels' configuration Modify section 4.1 Product Marking, add NCC and P/N Labels
0.5	2025/01/10	• Following cricfg tool Menu items to adjustment • Add criwifitool shell command to get RSSI information in section 2.1.4 and Connection Status in section 2.2.2

About This Document

- Illustrations in this documentation might look different from your product.
- Depending on the model, some optional accessories, features, and software programs might not be available on your device.
- Depending on the version of operating systems and programs, some user interface instructions might not be applicable to your device.
- Documentation content is subject to change without notice. Coretronic Reality Inc. (CRI) makes constant improvements on the documentation of your computer, including this guidebook.

Table of Contents

1. Introduction

CRI R405LQ LR Module is a high performance wireless network device, and leverage WiFi technology to implement long distance connection and data communication. It can through USB or UART to connect with Host controller, and work similar as external WiFi network module. The R405LQ can support RNDIS (Remote Network Driver Interface Specification) standard as module interface control.

When using R405LQ LR to build up connection network, please need to set up one of R405LQ LR as AP mode (default), and others R405LQ LR are set as STA (Cline) mode. They are communicate working in closed network areas.

1.1 Features and Specification

The following table shows the detailed features and Spec. of R405LQ LR module.

Key features of R405LQ LR module

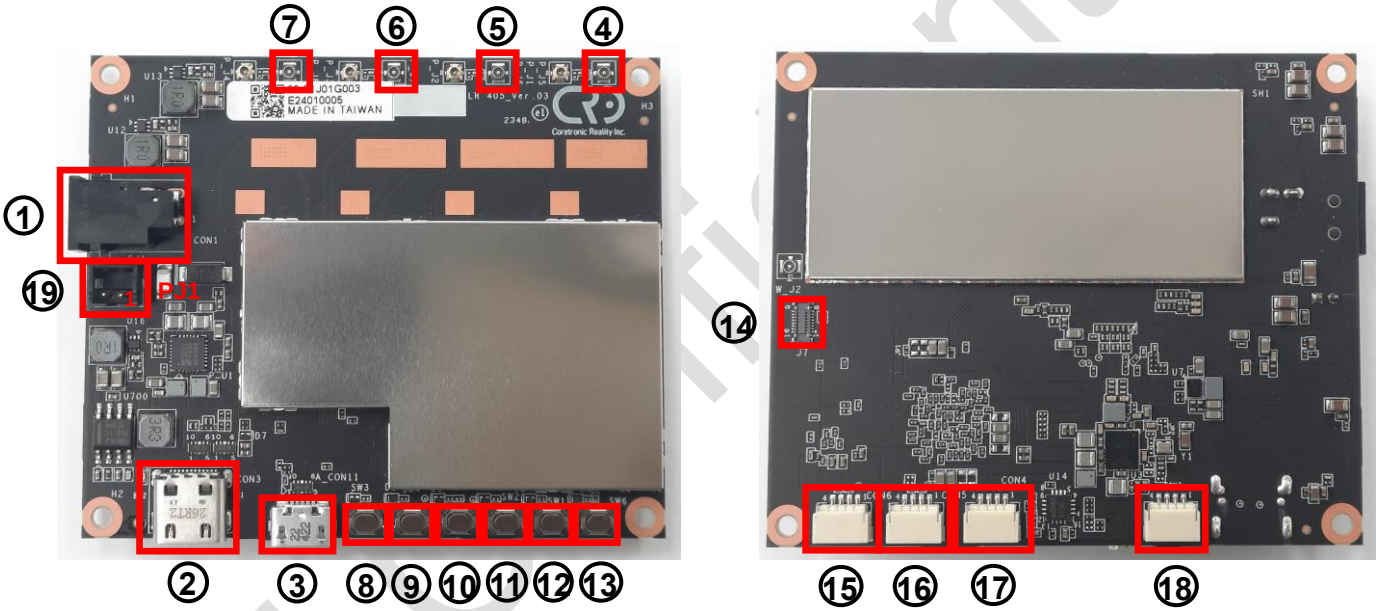
Item	Description
Platform	Qualcomm QCS405 + QCN9074
Technology	Leverage Wi-Fi 6 (802.11ax)
MIMO	4T4R
Frequency	● 2412MHz~2462MHz ● 5180MHz~5240MHz / 5745MHz~5825MHz
RF signal B.W	5MHz / 10MHz / 20MHz
Throughput	240 Mbps (TBC)
Radio Tx Power	● ≦ 24dBm @ 2.4GHz ● ≦ 24dBm @ 5GHz
Distance	> 10KM (Open space without distractions)
Connection Interfaces	1. USB 3.0 (Type C) 2. USB 2.0 (Micro USB, for FW UD) 3. UART x2 (1.8V) 4. UART x1 (3.3V, for Debug only) 5. Buttons x6
Power Supply	DC 6.6V~17V via Power Jack
Power Consumption	● 2.4GHz 4T4R Tx < 9.8W ● 2.4GHz 4T4R Rx < 4.0W ● 5GHz 4T4R Tx < 13.8W ● 5GHz 4T4R Rx < 4.5W
Dimension	60 x 72 x 9.9 mm

Item	Description
Weight	Around 21 g
Operation Temp.	-20 ~ 70 ℃
Storage Temp.	-20 ~ 70 ℃
Device Driver	RNDIS (Remote Network Driver Interface Specification)

Notice : When using, be sure to connect the antenna as a load at the antenna terminal to prevent no-load reflection from damaging the PA.

1.2 Major interface components location

Below picture identify the major interface components and connectors found on the R405LQ LR module



No.	Function Description	No.	Function Description
1	DC Power Jack	11	Key SW, FAST BOOT MODE *1
2	USB 3.0 Type C	12	Key SW, N/A
3	USB 2.0 Micro (for FW UD)	13	Key SW, USB BOOT *1
4	RF Conn, Chain 1	14	JTAG (for Debug only)
5	RF Conn, Chain 2	15	UART (1.8V, CON6)
6	RF Conn, Chain 3	16	UART (1.8V, CON5)
7	RF Conn, Chain 4	17	UART (3.3V, for Debug only, CON4)
8	Key SW, Power	18	USB 2.0 (ALT with #3 for FW UD, CON7)
9	Key SW, Volume up +	19	Option Power Conn PJ1 *2
10	Key SW, Volume down -		(Hirose, DF3-2P-2DSA(01))

*1 Keep pressing during power on entry

*2 pin-1 : DC power in, pin-2 : GND

1.3 MIMO RF Channels' configuration

R405LQ module can be configured MIMO models listed in below

	CH1	CH2	CH3	CH4
2T/2R	TX/RX	NA	TX/RX	NA
2T/4R	TX/RX	RX	TX/RX	RX
4T/4R	TX/RX	TX/RX	TX/RX	TX/RX

RF Antenna Connect type : I-PEX MHF4, P/N : 20449-001E-03

2. Device Tools Operation

This chapter introduces the detail setup and testing steps of R405LQ LR Module build in configuration tools, and via PC's connection and operation. Please install the ADB (Android Debug Bridge) environment in your PC at first, then refer section 1.2 to setup R405LQ LR Module and connected with PC via USB cable.

Please use the "adb devices" command to check whether the R405LQ LR module is successfully connected to the PC ? Then use the "cricfg" command to enter the device tool's control menu of R405LQ LR Module.

```
D:\>adb devices
List of devices attached
238     device

D:\>adb shell
/ # cricfg
```

2.1 AP mode Menu operation

R405LQ LR EVA KIT can be configured as AP (Access Point) mode or STA (Station, Cline) mode through System Menu setup. This section introduces when R405LQ LR is configured as AP mode then re-power on. After connected with ADB PC, and enter "cricfg" command. The items select Menu will be shown on ADB PC as below.

```
Software version: 2.3.4
*~*~*~*~*~*~*~*~*~ CRI Wi-Fi Config Tool - Menu    ~*~*~*~*~*~*~*~*~*~
    SAP Menu
 1: SAP - Settings
 2: SAP - Switch Channel / Bandwidth
 3: SAP - Advance Setting (CBS/SBS)
 4: SAP - Get Current Channel and Bandwidth
 5: SAP - Get RSSI
 6: SAP - Throughput Test
 7: SAP - Change Network Mode (Beta)

    System Menu
91: System - Set device as SAP mode.
92: System - Set device as STA mode.
93: System - [ ● ] iperf service.
94: System - ANT configuration
95: Device Info

99: Factory Reset. (Reset Wi-Fi functionality only)

 0: Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed:
```

2.1.1 Settings (SSID)

When enter “1” at top menu, then into “SAP - settings” menu.

```
*~*~*~*~*~*~*~*~*~*~*~*~ CRI Wi-Fi Config Tool - Menu ~*~*~*~*~*~*~*~*~*~*~*~
    SAP settings
 1: SAP - Get the Current  And PSK.
 2: SAP - Set the New SSID And PSK

 0. Exit.

Please enter the operation number to be performed: _
```

You can enter “1” again to get current SSID and Password set

```
ssid=CRIssidJeff
#wpa_passphrase=12345678

*~*~*~*~*~*~*~*~*~*~*~*~ CRI Wi-Fi Config Tool - Menu ~*~*~*~*~*~*~*~*~*~*~*~

```

Or, enter “0” will exit to go back top Menu

2.1.3 Advance Setting (CBS / SBS)

When enter “3” at top menu, then into “SAP – Advance setting (CBS/SBS)” menu.

```
*~*~*~*~*~*~*~*~*~*~ CRI Wi-Fi Config Tool - Menu    ~*~*~*~*~*~*~*~*~*~
    Advance setting
 1. [    ] Auto Channel Selection (5 GHz)
 2. [    ] Auto Channel Selection (2.4 GHz)
 3. [    ] DCS+CBS: 2.4 GHz and 5 GHz non-DFS channels
 4. [    ] DCS+SBS All 5 GHz channels

 0: Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed:
```

You can choose suitable item to decide channel frequency hopping range depend on RF usage.

For example, enter “3” to enable DCS+CBS frequency hopping range

```
This feature has been configured.

*~*~*~*~*~*~*~*~*~*~ CRI Wi-Fi Config Tool - Menu    ~*~*~*~*~*~*~*~*~*~
    Advance setting
 1. [    ] Auto Channel Selection (5 GHz)
 2. [    ] Auto Channel Selection (2.4 GHz)
 3. [ ● ] DCS+CBS: 2.4 GHz and 5 GHz non-DFS channels
 4. [    ] DCS+SBS All 5 GHz channels

 0: Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed:
```

(You can choose active item again to disable)

2.1.4 Get RSSI

When enter “6” at top menu, then can get RSSI information shows in below as reference depend on R405LQ LR working environment and situation.

```

```

2.2 STA (Cline) mode Menu operation

This section introduces when R405LQ LR is configured as STA (Cline) mode then re-power on. After connected with ADB PC, and enter “cricfg” command. The below items select Menu will shows on ADB PC.

```
Software version: 2.3.4
*~*~*~*~*~*~*~*~*~*~ CRI Wi-Fi Config Tool - Menu    ~*~*~*~*~*~*~*~*~*~*
    STA Menu
 1: STA - Scan the Available Hotspots
 2: STA - Settings
 3: STA - Switch AP
 4: STA - Connection status
 5: STA - Throughput test

    System Menu
91: System - Set device as SAP mode.
92: System - Set device as STA mode.
93: System - [   ] iperf service.
94: System - ANT configuration
95: Device Info

99: Factory Reset. (Reset Wi-Fi functionality only)

 0: Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed:
```

2.2.1 STA (Cline) Setting

When enter “1” at top menu, then into “STA - Settings” menu.

```
    STA Settings
 1: STA Mode: Show WPA supplicant network Info.
 2: STA Mode: Get Connected SSID And PSK.
 3: STA Mode: Add new SSID And PSK.
 4: STA Mode: Remove Saved SSID.
 5: STA Mode: List the Actived WPA supplicant.

 0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: _
```

You can enter “2” to get current connected SSID of AP

```
Current current connection, ssid:  CRIssidJeff

    STA Settings
 1: STA Mode: Show WPA supplicant network Info.
 2: STA Mode: Get Connected SSID And PSK.
 3: STA Mode: Add new SSID And PSK.
 4: STA Mode: Remove Saved SSID.
 5: STA Mode: List the Actived WPA supplicant.

 0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: 2_
```

Or, enter “5” to get the list of active WPA supplicant which shows as below picture as reference.

```
network id / ssid / bssid / flags
0       CRIssidJeff     any     [CURRENT]

    STA Settings
 1: STA Mode: Show WPA supplicant network Info.
 2: STA Mode: Get Connected SSID And PSK.
 3: STA Mode: Add new SSID And PSK.
 4: STA Mode: Remove Saved SSID.
 5: STA Mode: List the Actived WPA supplicant.

 0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: 5_
```

2.2.2 STA Connection status

When enter “4” at top menu, then get current W405LQ LR Cline connection information.

```
~*~*~*~*~*~*~*~*~*~ CRI Wi-Fi Config Tool - Menu ~*~*~*~*~*~*~*~*~*~
    STA Menu
 1: STA - Scan the Available Hotspots
 2: STA - Settings
 3: STA - Service Switch (on/off)
 4: STA - Connection status
 5: STA - Throughput test

    System Menu
91: System - Enable device as SAP mode.
92: System - Enable device as STA mode.
93: System - Enable iperf service.
95: Device Info
99: Factory Reset.

 0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: 4_
```

```
Connected to 46:a8:42:ff:46:a8 (on ath1)
        SSID: CRIssidJeff
        freq: 5220
```

BTW, except to through cricfg tool Menu choose to get Connection status, user can also through criwifitool shell command to get.

./vendor/cri/wifi/sh/criwifitool.sh getConnStat

- Connected: return 1, SAP mac address
- disconnected: return 0

```
/ # ./vendor/cri/wifi/sh/criwifitool.sh getConnStat
1,46:a8:42:ff:46:dd
```

2.2.3 STA Throughput Test

When enter “5” at top menu, then into “STA – Throughput Test” menu

```
*****************~ CRI Wi-Fi Config Tool - STA throughput test ~*****************
 1: TCP: iperf 10 seconds
 2: TCP: iperf 60 seconds
 3: TCP: assign time
 4: UDP: iperf 10 seconds
 5: UDP: iperf 60 seconds
 6: UDP: assign time

 0. Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed: 4_
```

Choose the throughput test item number to perform the test as requirement, and result shows in below as reference

```
run: iperf3 10 seconds in UDP.

iperf Done.
```

2.3 System Menu operation

The “System Menu” are common supported by both AP mode and STA (Cline) mode of R405LQ LR.

```
    System Menu
91: System - Set device as SAP mode.
92: System - Set device as STA mode.
93: System - [    ] iperf service.
94: System - ANT configuration
95: Device Info

99: Factory Reset. (Reset Wi-Fi functionality only)

 0: Exit or Return to the Upper Level Directory.

Please enter the operation number to be performed:
```

2.3.1 System – Enable device as SAP mode

When enter “91” at top menu, then R405LQ LR module will be configured as AP mode, and disable STA (Cline) mode.

Note : The system only changes the configuration file. To complete the change mode, you need to restart the device.

2.3.2 System – Enable device as STA mode

When enter “92” at top menu, then R405LQ LR module will be configured as STA (Cline) mode, and disable AP mode

Note : The system only changes the configuration file. To complete the change mode, you need to restart the device.

2.3.3 System – Enable iperf service

When enter “93” at top menu, then R405LQ LR module will enable iperf service. After enable iperf service, the R405LQ LR can perform to response specified iperf test package on network. You can choose active item again to disable test service.

```
93: System - [ ● ] iperf service.
```

2.3.4 Device Info

```

2.3.5 Factory Reset

2.4 Throughput test by paired 2 sets EVA Kit

This chapter will introduce how to use 2 sets EVA Kit, one is setup as AP mode, and another one is setup as STA mode, then through R405LQ module build in tools to perform “iperf” throughput test as evaluation case.

2.4.1 Setup at AP side

A. Please refer chapter 2.3.1 System Menu 91 operation to setup 1st EVA Kit as AP mode. Please re-power off/on once mode has been changed.
B. Please refer chapter 2.3.3 System Menu 93 operation to Enable iperf service.

2.4.2 Setup at STA (Cline) side

A. Please refer chapter 2.3.2 System Menu 92 operation to setup 2nd EVA Kit as STA (Cline) mode. Please re-power off/on once mode has been changed.
B. Please refer chapter 2.3.3 System Menu 93 operation to Enable iperf service
C. Please refer chapter 2.2.2 STA Menu 4, to check WiFi connection status, and confirmed WiFi has been connected.

2.4.3 Perform iperf test

A. Please refer chapter 2.2.3 STA Menu 5, to enter STA Throughput Test Menu. Then, choose the test item which you would like to do ?
B. For example, after enter 4, then the test result of “UDP : iperf 10 second“ will be shown like below picture.

```
run: iperf3 10 seconds in UDP.
